## Introduction

A nice little stompbox emulation for the bass guitar. It's modeled against a popular little box and this will definitely find a place in your mix with no big efforts. This is the second generation of this plugin, featuring new GUI and a new very detailed op-amp model giving it less artificial sound.

## Features

- Input: Control the incoming (guitar) signal. Value of 1.0 = +0dB and 2.0 = +6dB
- Level, Drive, Low, High, Presence, Blend
- Quality switch: 'LO' and 'HI' setting. HI setting removes additional aliasing.

## Minimum System Requirements:

- CPU must support SSE2 instructions. (Pentium 4 / AMD Athlon XP) ++
- 32 bit or 64 bit Windows XP / OSX 10.5 / or higher.
- DAW / AU / VST host (Reaper or similar)

A processor of Intel type i5/i7 CPU is recommended for the best experience..

A big thanks to the users of TSE AUDIO plugins!

**THIS IS A FREWARE PRODUCT  
ENJOY!**
